Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cytoplasmic, nuclear, membrane bound and secreted polypeptides and nucleic acids encoding the polypeptides for diagnosing and treating e.g. cancer, Alzheimer's disease, cardowyopathy, metabolic disease and

Claim 8; Page 19; 305pp; English.

The present invention relates to new NOVX (NOV1-10) polypeptides. The molecules of the invention are useful for treating or preventing a molecules of the invention are useful for treating or preventing a disorder related to cell signal processing and metabolic pathway modulation in humans. NOYX polypeptides, nuclaic acids and antibodies are useful for treating or preventing disorders or syndromes including breast cancer, Altahimmer's disease, epilepsy, Huntingron's disease, anxiety, behavioural disorders, multiple sclerosis, mysthemia gravis, neurodegeneration, Parkinson's disease, pain, stroke, autoimmune disease, allargise, addiction, asthma, endometriosis, graft versus host disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial and disease, laterial di

and Cytoplasmic, nuclear, membrane bound and secreted polypeptides and nucleic acids encoding the polypeptides for diagnosing and treating e.g. cancer, Alzheimer's disease, cardiomyopathy, metabolic disease diabetes.

Claim 8; Page 12; 305pp; English

The present invention relates to new NOVX (NOV1-10) polypeptides. The

MONY-associated disorder, usus cardiomyopathy, atherosclerosis, or a disorder related to cell signal processing and metabolic pathway a disorder related to cell signal processing and metabolic pathway modulation in humans. Movy polypeptides, nucleic acids and antibodies are useful for treating or preventing disorders or syndromes including breast cancer. Altahamer's disease, epilepsy, Huntington's disease, anxiety, behaviouxal disorders, multiple sclerosis, myschenia gravis, neurodegeneration, parkinson's disease, pain, stroke, autoimmune host disease, allergies, addiction stream, endometriosis, graft versus host disease, allergies, rheumatods, scleroderma, transplantation, psorhasis, cronn's disease, HUN Human immunodeficiency vixus) infection, psorhasis, cronns disease, HUN Human immunodeficiency vixus) infection, clinose transport defect, glomerulomephritis, hypercalcaemia, polycystic clinose transport defect, glomerulomephritis, hypercalcaemia, polycystic clines disarboe, respiratory disease, gastro-intestinal diseases, compental disarboe, respiratory disease, gastro-intestinal diseases, curinary system disorders, osteoporosis, dental disease and infection, growth and reproductive disorders, hypogenadism, fertility, and/or other curinary system disorders, viral, bacterial, or parasitic infections. Therefore the present mucleic acid sequence encodes a NOVX protein of the Sequence 2997 BP; 728 A; 783 C; 809 G; 673 T; 4 other; useful for treating molecules of the invention are

(I) may be used to screen for substances (S) that may modulate its activity. Administering s (which modulates procease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoletic origin, of the breast, colon, lung, prostrate, cervical, disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, neurolajical disorders, hypotension, hypotension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   may

The invention relates to a polypeptide belonging to the ADAMYS family is selected from sequences appearing as AAD19466, AAD19491 and AAD19499.

selected from sequences appearing as AAD19466, AAD19491 and AAD19499.

Compared to the contains the polypeptide, a protein having not less than polypeptide modified from any of the polypeptides but with some amino cid sequence of the polypeptides but with some amino cid sequence of the polypeptides or a mino cid sequence of the polypeptides but with some amino cid sequence of the polypeptides but with some amino cid sequence or the polypeptide but with some and polypeptides or variants, a recombinant vector containing any of the polypeptide, protein or populate the polypeptide, protein or peptide and screening compounds to promote or inhibit expression of the polypeptide, protein or peptide and screening compounds to promote or inhibit expression of the polypeptide protein, peptide and screening compound for context before evaluating the polypeptide protein, peptide and encoded gene collypeptide by using the polypeptide protein, peptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes. The polypeptide and encoded gene activity by measuring signal changes and screening compound to contain and gastric ulcers and post-operative healing signal changes including such polypeptide has conserved reprolosity. Activity of the gene on the spending and decrease in tumour cell and location of the gene on the spending cha

Also included are the polypeptides but with some amino caids deleted, substituted, added or inserted. Also included are the polymorlectides encoding the polypeptides (or their complementary strands or variants), a recombinant vector containing any of the polymorlectides, a transformant which is transformed with the recombinant vector, protecting the polypeptide, protein or peptide py culturing the creator, protein an antibody that can recognize the polypeptide, protein or peptide and screening compounds to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polymorlectide, by using the polypeptide, protein, peptide, the polymorlectide, we measuring signal changes. The polypeptide and encoded gene cartivity by measuring signal changes. The polypeptide and encoded gene cartivity by measuring signal changes. The polypeptide and encoded gene cartivity by measuring signal changes. The polypeptide and encoded gene cartivity by measuring signal changes. The polypeptide and encoded gene cartivity by measuring signal changes. The polypeptide and encoded gene cartivity by and in diagnosis and screening compositions. 4529 9 4190 GCAGGCACCTGCGTGCGCCATGGGACCGGAGCGGCAGCGCTGGGAGCCGGAGCGTCCC 4249 250 GCGTCCTCCTCCACCCCCCCGCGCCGCCCGCTGGATGGGAAAGGCCG------- 4296 1297 -----AATATGACCTGGTCTCTGCCTACGAGGTTGACCACAGGGGGATTACGTGTCC 4349 1350 CATGAAATCATGCACCATCAGCGGGGAGAAAGAGTGGCCCGTGTCCGAGGTTGAGTCT 4409 1410 CTTCACCTTCGGCTGAAAGCCCCCAGGCACCTTCCACATGGATCTGAGGACTTCCAGC 4469 .530 CAGACITTACCGCCAGAGGACTTCTGTTTCTATCAAGGCTCTTTGCGATCACACAGAAAC 4589 ----- GreeccerraeAccreeceAescriere 4625 chronic theuse the state of the 441 561 621 681 202 GCAGGCACCTGCGTGCGCCATGGGACCCGCAGCGCCAGCGCCTGGGAGCCCGAGCGTCCC 261 GCGTCCTCCTCCACCCGCGGAGCGGCCGGGCTGGATGGAAAAGGGCGGGACATGGATGAA 321 682 TCGCCATCGCATGGAGGGAAGTTCTGTGAGGCTCCACTCGCACTCTGAAGCTCTGCAAC 741 742 AGTCAGAAATGTCCCCGGGACAGTGTTGACTTCCGTGCTGCTCAGTGCCGAGCACAAC 801 442 CHTGAAATCATGCACCATCAGCGGGGGAGAAGAGCAGTGGCCGTGTCCGAGGTTGAGTCT CTTCACCTTCGGCTGAAAGGCCCCAGGCACGACTTCCACATGGATCTGAGGACTTCCAGC 4470 AGCCTAGTGGCTCCTGGCTTTATTGTGCAGACGTTGGGAAAGACAGGCACTAAGTCTGTG 622 CAGACTTTACCGCCAGAGGACTTCTGTTTCTATCAAGGCTCTTTGCGATCACACAGAAAC 382 CTCACTCAATATGACCTGGTCTCTGCCTACGAGGTTGACCACAGGGGGGATTACGTGTCC 0; Mismatches 177; Indels 245; Gaps 64.9%; Score 1877.8; DB 24; Length 8505; 84.4%; Pred. The invention comprises the amino acid and coding sequence of the human MDTS9 procease. The MDTS9 DNA and protein sequences of the invention are useful for screening for transforming growth factor (TGF)-bera inhibitors and for the treatment of chronic renal failure. The present DNA sequence encodes the human MDTS9 protease of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             69 GCAGGCCCGGCGCCATGGGACCCGCAGGGCCCTGGGAGCCCGGAGCGTCC 128

The nucleic acid is useful for the preparation of a medicament for diagnosting preventing or treating disorders (e.g. using gene therapy) or diseases associated with the novel human proteins, e.g., obesity. This sequence encodes a novel human protease.

preparation of a medicament for diagnosing, preventing or treating disorders or diseases associated with the NHP, e.g., obesity

Disclosure, Column 25-30; 17pp; English.

The invention describes a new isolated nucleic acid comprising a sequence that encodes a fully defined protein sequence comprising 91 or 1224 amino acids or that hybridises under stringent conditions with the 3675-bp sequence or its complement. The nucleic acid is useful for the preparation of a medicament for diagnosing, preventing or treating disorders (e.g. using gane therapy) or diseases associated with the novel human proteins, e.g., obesity. This sequence encodes a novel human protease.

Sequence 4042 BP, 947 A; 1117 C; 1130 G; 848 T; 0 other;

and cytoplasmic, muclear, membrane bound and secreted polypeptides and nucleic acids encoding the polypeptides for diagnosing and treating e.g. cancer, Alzheiner's disease, cardiomyopathy, metabolic disease diabetes

Claim 8; Page 14-15; 305pp; English.

The present invention relates to new NOVX (NOV1-10) polypeptides. The molecules of the invention are useful for treating or preventing a NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or a disorder related to cell signal processing and metabolic pathway modulation in humans. NOVX polypeptides, nucleic acides and antibodies are useful for treating or preventing disorders or syndromes including breast cancer, Alzheimer's disease, epilepsy, Huntington's disease, anxiety, behavioural disorders, multiple sclerosis, mysthemia gravis, neurodegeneration, Parkinson's disease, pain, stroke, aucoimmune disease, allergies, addiction, athma, endometriosis, graft versus host disease, systemic lupus exythemacousus, scleroderma, transplantation, psoriasis, Crohn's disease, HIV (human immunodeficiency virus) infection,

Human; NOVX; cardiomyopathy; atherosclerosis; cell signal processing; breast cancer; Alzheimer's disease; epileppy; Huntington's disease; anxiety; behavioural disorder; multiple sclerosis; myasthenia gravis; neurodegeneration; Parkinson's disease; pain; stroke; endometriosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to the DNA and protein sequences of novel located human proteases (PRTS). The protein sequences of the invention are useful for screening a compound for effectiveness as an agonist or antagonist of its activity, the identified agonist and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human proteases useful for diagnosing, preventing or treating anorexis, myocardisl Infarction, Addison's disease, hepatitis, Chahing's syndrome, eczema, Parkinson's disease, and impotence
                                                                                                                                                                                           /*tag= a

antagonist are useful for treating a disease or condition associated
The PRTS protein is also useful as an immunogen for preparing polyclonal
CC or monoclonal antibodies by hybridoma technology. An antibody that binds
the PRTS proteins is useful for detection and purification of the
pRTS proteins and can be used to diagnose a condition or disease associated
the PRTS proteins is useful for detection and purification of the
proteins and can be used to diagnose a condition or disease associated
the proteins and can be used to diagnose a condition or disease associated
the proteins of pastroin are useful for in a biological smalle. The
sequences of the invention are useful for diagnosis, treatment and
CC prevention of gastrointestinal disorders such as qastrifis, ulcerative
colitis, Reye's syndrome, etc. cardiovascular such as atherosclerosis,
disorders such as acquired infarction, etc. autoimmune/inflammatory
disorders such as acquired infarction, etc. autoimmune/inflammatory
disorders such as acquired infarction, etc. autoimmune/inflammatory
cave a disease, etc. pell proliferative disorders such as
cushing's syndrome, epithelial disorders such as dermatitis, scabies,
cersem, etc. neurological disorders such as dermatitis, and isease,
dementia, Alzheimer's disease, Huntington's disease, multiple sclerosis,
cerson, etc. or neurological disorders such as pervoductive disease,
dementia, Alzheimer's disease, Huntington's disease, multiple sclerosis,
cerson, etc. or reproductive disorders such as energience the
cross reproductive disorders such as infertiilty, impotence. The
colities of the invention. \$88888888888888888888888

                         The invention relates to a polypeptide belonging to the ADAMTS family is selected from sequences appearing as AAM79469, AAM79497 and AAM79499, a protein that contains the polypeptide, AAM794949 and AAM79499 by the polypeptide and the contains the polypeptide, a protein having not less than 504 homology with the amino acid sequence of the polypeptides or a polypeptide modified from any of the polypeptides but with some amino acids deleted, substituted, added or inserted. Also included are the polymented secondary is a recombinant vector containing any of the polymented as a transformant which is transformed with the recombinant vector, producing the polypeptide, protein or peptide by culturing the transformation and recognize the polypeptide, protein or peptide and screening compounds to promote or inhibit activity of the
                                                                                                                                                                                                                                                               antiarthritis antiulser, vulnerary, neovascularisation, angional diabelis cometropathy, chronic rheumatoid arthritis, gene therapy; refractory skin ulcer; gastric ulcer; post-operative healing failure; reprolysin-type ZN-metalloprocease domain; disintegrin-like domain; TSP1, thrombospondin type 1 domain; sexual cycle; tumour; SP-syndrome deletion; chromosome 5p15.2-15.3, Cri-du-chat syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       applicable in diagnosis and screening compounds for drug compositions in treating diseases due to e.g. neovascularisation

polypeptide or protein, or to promote or inhibit expression of the polypeptide, by using the polypeptide, protein, peptide, the polyprolecoide, vector, transformant or/and antibody, particularly in the polypeptide, protein, peptide, the carticularly in the polyprolecoide or test compound for contact before evaluating the activity by measuring signal changes. The polypeptide and encoded gene are applicable in diagnosis and screening compounds for drug compositions in reating diseases due to neovascularisation, diabetic omentopathy, chronic rheumatoid arthritis, angioma, refractory skin and gastric ulcers and post-operative healing failure, including gene therapy.

The gene encoding such polypeptide has conserved reprolyabin-type ZN metalloprotease domain, disintegrin-like domain and 19P1 (thrombospondin type 1) domain. Its encoded protein is characterised by high expression type 1) domain. Its encoded protein is characterised by high expression convaries, changes in expression dose depending on the sexual cycle, a decrease in tumour cell and location of the gene on the 5P-syndrome delection site on thromosome 5pls. 2-15.3 (associated with EV-syndrome) the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1069

The invention relates to a polypeptide belonging to the ADAWTS family is selected from sequences appearing as AAU7946, AAU79497 and AAU79499, and Eacted from sequences appearing as AAU7946, AAU79497 and AAU79499.

Selected from sequences appearing as AAU7946, AAU79497 and AAU79499, a protein that contains the polypoptide, a protein having not less than 504 homology with the amino acid sequence of the polypeptides or a polypeptide but with some amino acids deleted, substituted, added or inserted. Also included are the polypeptides endeding the polypeptides (or their complementary strands or variants), a recombinant vector containing any of the polymucleotides, a transformant which is transformed with the recombinant vector, proximing the polypeptide and screening compounds to promote or inhibit activity of the polypeptide or protein or to promote or inhibit activity of the polymucleotide by using the polypeptide, protein, peptide, the polymucleotide by using the polypeptide, protein, peptide, the polymucleotide, vector, transformant orfand antipolody, particularly in playmucleotide, vector, transformant orfand antipolody, particularly in the presence of a test compound for contact before evaluating the activity by measuring signal changes. The polypeptide and encoded gene

are applicable in diagnosis and screening compounds for drug compositions in treating diseases due to neovaecularisation, diabetic omentopathy, chronic rheumatoid arthritis, angioma, refractory skin and gastric ulcers and post-operative healing failure, including gene therapy. The gene encoding such polypeptide has conserved reprolysin-type ZN metalloprocease domain, disintegrin-like domain and TSP1 (thrombospondin type 1) domain. Its encoded protein is characterised by high expression in oversession descrease in tumour cell and location of the gene on the Servain cried, adeletion site on chromosome 5915.2-15.3 (associated with Cri-du-chat syndrome). The present sequence is the expression Plasmid prastBaci-HT-PJ01256 used to express DNA encoding an ADAMTS protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGGCAACATCATTGGCAGGAGGAGCAATCGAGTCTTCTCCTGGTCACCCTG

WPI; 2002-575457/61. P-PSDB; ABG31503. New isolated polynucleotide encoding an ADAM-TS-like zinc the training, ameliar and the tree training, ameliar and or treating dystunctions such as COPD, CNS and cardiovascular disorders

Claim 1; Fig 1; 119pp; English.

This invention relates to a novel isolated polymucleotide encoding an CARM-TS-like zinc metallogrotesse polypeptide. The protean of the invention may have cardiant, asotropic, antiarrhythmic, hypotensive, autiparkinsonian, anciropic neuropic antiarrhythmic, hypotensive, antiparkinsonian, anci-HV, neuroleptic and tranquiliser activity. The DNA sequence of the Invention may be used in gene therapy as a consequence of the Invention may be used in gene therapy as a CR - antagonist or a CR - antagonist. The Invention last compitieses an expression vector containing the ADAM-TS-like zinc metalloprotease. These reagents can be used in the manufacture of a medicament for disorders such as CORD, cardiovascular disease of a medicament for disorders such as CORD, cardiovascular disease. Congestive heart failure, myocardial infarction, ischaement heart disease, atrial and ventricular arrhythmias, hypertension and peripheral exclusive heart failure, myocardial infarction, ischaement, east, according and cerebrovascular disorders (Parkinson's disease, corticobasal degeneration, motor neuron disease, dementia, multiple sclerosis, stroke, Alzhelmer's disease, Huntington's disease, contextor, Motor neuron disease, dementia, multiple sclerosis, stroke, Alzhelmer's disease, Huntington's disease, dementia, schiophrafia, psychosis and attention can deficit disorders). Pharmaceutical compositions of the invention can excluse allogrotease of the invention, this gene is located on human chromosome 5.

Flease visit our was site for further details. We.intep://genome.gsc.rixen.go.jp/. URLittep://fantom.gsc.rixen.go.jp/.		feature 1232 a tch tch and Similari	

I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The dT-tailed vector was circularized with E. coli DNA ligase after digestion of EcoRT which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Toplof* by electroporation method. The CDNA libraries constructed by this method are full-length enriched cDNA library."	Ouery Match 15.8%; Score 456.4; DB 12; Length 625; Best Local Similarity 99.8%; Pred. /noce="07gan: Stomach; Vector: pCNS; Site_l: EcoRI;
Site_2: Moult: The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (IAP) and then decapped
intact mRNA was ligated with DNA-NNA linker including EcoR
I site by treatment of T RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
primming with dT-tailed vector. The CDNA vector was
adjusted to have about 60nt. The CDNA vector was
adjusted to have about 60nt. The CDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
competent cells E. coli ToplOF' by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched CDNA library."
